Information

The following observations were made at Wolfsbehringen airfield which was under construction in the area west of Haina:

31 October. Grading work was completed on a strip about 400 meters wide and of an undetermined length, located west of Haina and extending approximately in a west-northwesterly direction. A stretch 60 to 80 meters wide and 1.5 meters deep was being excavated by 4 draggers which operated in a staggered arrangement aft of each other.

7 November. The excavated section was 1,000 meters long, the excavated earth was hauled away by 3 field railways and raised on a sloping terrain. Work at the field was presumably done by the Weimar highway engineering plant, as was inferred from the name plates on the vehicles, barracks and equipment. In addition to 4 excavators and 8 field railway locomotives, 3 bucket dredgers and about 80 tippers were observed. Sand, gravel, crushed stones and round reinforcement iron bars stored north of the graded terrain. Cement was stored in an undetermined number of solid compartments. 25X1

Comment. According to available information, a runway about 2,200 meters long and 60 meters wide and a northern taxiway are planned to be built at Wolfsbehringen airfield. 25X1
